# Rolando Fernández

**UX Engineer**

Passionate about technologies, I explore them in a creative, strategic, and marketing dimension. Meticulous and precise in the execution of my work, I am able to identify the difficulties and risks of project management by organizing teams according to the activities and constraints. I install innovative and disruptive ideas to propose new user experiences and create emotion. I test, assemble, prototype, create, exchange, and transmit to develop concepts and solutions to problems or needs.
